

# Go Live

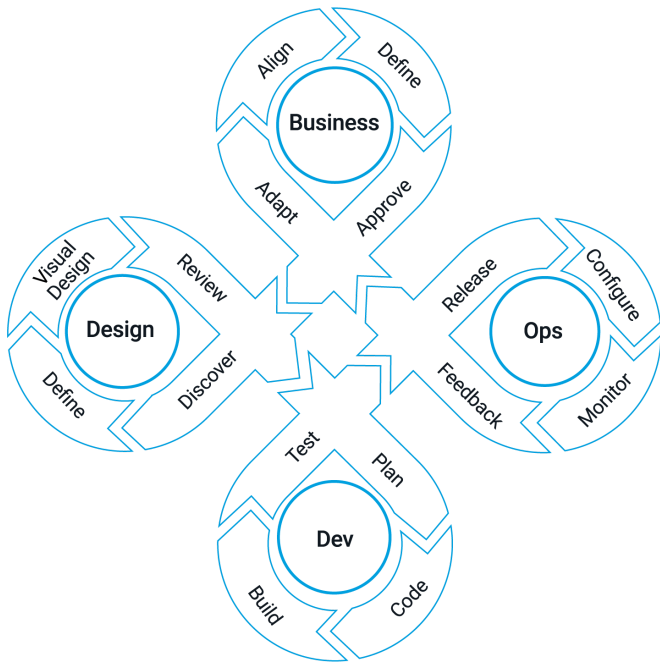

## Entando Professional Services Packages

Last updated: 2022-07-06

**Entando is the leading application composition platform for Kubernetes, enabling enterprises to rapidly innovate using modern technologies.**

Entando Professional Services can showcase the benefits and fast-track adoption of the Entando Platform by guiding your development from conception to execution. Our team will walk you through taking your Entando Application live in production, refining implementation and ensuring optimized resources and capabilities. We will empower your digital journey, supporting all aspects of your business with the latest industry insights and recommendations to accelerate growth.

### Select from Entando Go Live options:

- Architecture Review
- Kubernetes and Application Assessment
- CI/CD pipeline review
- Security Scan
- Launch support

### Deliverables:

- A customized strategy to refine your Entando-based solution and overcome your technological challenges
- An assessment of your K8s high availability and standard application practices
- An optimized CI/CD pipeline and tool recommendations
- A list of identified security vulnerabilities and recommended countermeasures
- Launch day and post-launch support

## Modernize your architecture and CI/CD pipeline

The Entando Architectural Review will prioritize your business needs when evaluating the architecture and configurations of your system. Our team will support the development and execution of your solution in a cloud-native environment, prescribe best practices, and provide patterns for component reuse and integration.

The base CI/CD pipeline option will review your implementation to streamline the creation of reusable components, providing user recommendations for the Entando CLI and standard tools such as GitHub Actions, Bitbucket Pipelines, Tekton, etc. Significant pipeline work, up to and including the implementation of a new CI/CD infrastructure, is available at additional cost.

## Build a secure Kubernetes-native solution

Kicking off a project on an efficient and insightful trajectory is a challenge. Specifying the architecture to speed up development of an enterprise-ready solution with top-notch security, high availability and optimized performance is especially difficult. Entando Professional Services will provide the expertise and resources to roll out your proof of concept, including launch day and post-launch support.

The Kubernetes and Application Assessment will review your production environment for DevOps best practices, such as techniques related to source control, supply chain checks, network configurations, security management, data storage, monitoring and governance tools, and backup strategies. Your high availability configuration will also be evaluated in the context of your current requirements. Specific improvements will be recommended and implemented, time permitting.

The performance of your Entando-based solution and success of your project are directly impacted by how well your application is protected. The Entando team will assess the integrity of your application by applying the principles and methods of security verification standards. To identify and prevent the exploitation of vulnerabilities, the team will simulate various attack vectors and recommend countermeasures. This security scan includes vulnerability assessment, penetration testing, mitigation and reassessment, and the reporting of criteria and findings.

## About Entando Professional Services

Entando Professional Services collaborates with customers to foster success in their digital evolution. Entando comprises a global team with extensive experience in a variety of industry sectors, including telecommunications, e-commerce, travel and digital entertainment. We will guide you through critical milestones and decisions, alleviating pain points and supporting or assuming ownership of governance, architecture, infrastructure, delivery and training.
